Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

Inventories, shipments and orders in manufacturing industries

January 1986

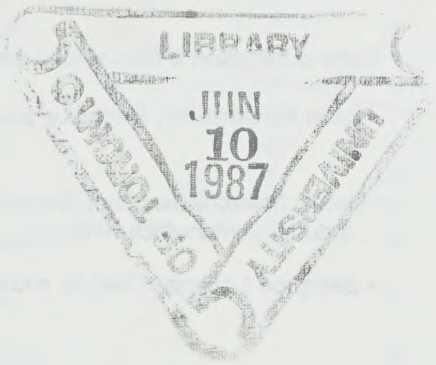

Projected from 1982 Census of Manufactures benchmarks with adjustment of 1983 shipments estimates to preliminary census data for that year.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.).

Stocks, livraisons et commandes des industries manufacturières

Janvier 1986

Projections effectuées à partir des données de référence du recensement des manufactures de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaires de recensement pour cette année.
Les tableaux que contient cette publication, sont depuis janvier 1985, basés sur la Classification Type des Industries 1980 (C.T.I.).

HIGHLIGHTS

January 1986

All estimates from January 1982 to January 1986 have been benchmarked to the 1982 Census of Manufactures and for shipments, adjustments have been made to incorporate preliminary Census levels for 1983. Prior to this release, all estimates were benchmarked to the 1981 Census of Manufactures.

These estimates also reflect updates to monthly data not incorporated in previously published data, classification and sample changes, and revised seasonal factors. As a result, estimates from 1982 onward are not directly comparable to previously published data. However, month-to-month trends of aggregate series are for the most part largely unchanged from those released earlier.

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries increased 0.4% to $21,514.1 million in January from the revised estimate of $21,433.5 million in December. This increase followed a gain of 0.7% in December. A $93.2 million increase in electrical and electronic products industries along with small increases in a number of major groups were offset by a $226.2 million decrease in transportation equipment industries. Durable goods industries shipments remained virtually unchanged at $10,357.4 million from $10,361.4 million while shipments of non-durable goods industries were up 0.8% to $11,156.6 million from $11,072.1 million.

- Seasonally adjusted, inventories owned by manufacturers at the end of January totalled $34,313.1 million, down 1.0% from the previous month's revised value of $34,646.2 million. Total inventories held decreased 0.7% to $35,439.7 million from $35,694.8 million, with decreases of 1.8% in finished products and 0.3% in raw materials, while goods in process remained virtually unchanged.

- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments declined from 1.62:1 in December to 1.59:1 in January. The ratio of finished products inventory to shipments went from 0.58:1 in December to 0.57:1 in January.

- The value of new orders received in January, seasonally adjusted, increased 0.4% to $21,645.9 million from the revised December estimate of $21,569.3 million. In the non-durable goods industries, new orders were valued at $11,183.9 million, up 1.2% from the revised estimate of $11,054.0 million in December. New orders of durable goods industries were down 0.5% to $10,-462.0 million from $10,515.4 million. A decrease of $166.9 million in transportation equipment industries accounted for most of the decline.

POINTS SAILLANTS

Janvier 1986

Toutes les estimations pour la période de janvier 1982 à janvier 1986 ont désormais comme point de référence le recensement des manufactures de 1982. Quant aux estimations de livraisons, des ajustements ont été faits afin d'inclure les premières données du recensement de 1983. Jusqu'à maintenant, toutes ces estimations étaient basées sur le recensement de 1981.

Ces nouvelles prévisions tiennent compte des mises à jour apportées à la classification, à l'échantillonnage, aux facteurs saisonniers révisés et aux données mensuelles nouvellement incluses. Ainsi donc, ces estimations ne pourront être comparées directement avec les données des communiqués antérieurs. Cependant, les tendances des variations mensuelles des séries agrégées demeurent en grande partie semblables à celles publiées auparavant.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $21,514.1 millions en janvier 1986, soit une hausse de 0.4% par rapport à la valeur révisée de $21,433.5 millions en décembre. Cette hausse suit un gain de 0.7% en décembre. Les biens durables ont demeuré presqu'inchangé alors qu'ils sont passés de $10,361.4 millions à $10,357.4 millions. Ceci est attribuable à gain de $93.2 millions dans les industries des produits électriques et électroniques ainsi qu'à de petits gains dans plusieurs grands groupes ayant été contrebalancées par une diminution de $226.2 millions dans les industries du matériel de transport. Les livraisons des biens non durables ont augmenté de 0.8% passant de $11,072.1 millions à $11,156.6 millions.

- La valeur désaisonnalisée du total des stocks possédés était de $34,313.1 millions en janvier, une baisse de 1.0% par rapport à la valeur du mois précédent de $34,646.2 millions. Pour leur part, les stocks détenus ont diminué de 0.7% à $35,439.7 millions de $35,694.8 millions. Des diminutions ont été enregistrées au chapitre des produits finis (- 1.8%) et des matières premières (- 0.3%), tandis que les biens en cours de transformation sont demeurés presqu'inchangés.

- Le rapport du total des stocks possédés désaisonnalisées aux livraisons désaisonnalisées est passé de 1.62:1 en décembre à 1.59:1 en janvier. Le rapport des produits finis aux livraisons est passé de 0.58:1 à 0.57:1.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $21,645.9 millions, ce qui représente une hausse de 0.4% par rapport au mois précédent qui était de $21,569.3 millions. Les nouvelles commandes des biens non durables ont atteint $11,183.9 millions, soit une hausse de 1.2% par rapport à la valeur révisée de décembre ($11,054.0 millions). Dans les industries des biens durables, la valeur estimative de $10,462.0 millions était inférieur de 0.5% à la valeur de décembre de $10,515.4 millions. Cette diminution est principalement attribuable à une baisse de $166.9 millions dans les industries du matériel de transport.

- The seasonally adjusted unfilled orders backlog at the end of January was $24,282.4 million, up 0.5% from the revised December estimate of $24,150.6 million. Unfilled orders increased 0.5% in the durable goods industries to $21,887.3 million from $21,782.8 million at the end of December. In the non-durable goods industries, unfilled orders were up 1.2% to $2,395.1 million from $2,367.8 million.

- Not adjusted for seasonal variation, manufacturers' shipments in January 1986 were estimated at $20,-102.7 million, 1.5% higher than the revised December value of $19,812.2 million and 9.4% higher than the revised January 1985 value of $18,380.9 million.

- La valeur estimative des commandes en carnet, après désaisonnalisation s'est établie à $24,282.4 millions en janvier, une hausse de 0.5% par rapport à la valeur de décembre de $24,150.6 millions. Les commandes en carnet des biens durables ont augmenté de 0.5% passant de $21,782.8 millions à $21,887.3 millions alors que celles des biens non durables ont augmenté de 1.2% à $2,395.1 millions de $2,367.8 millions.

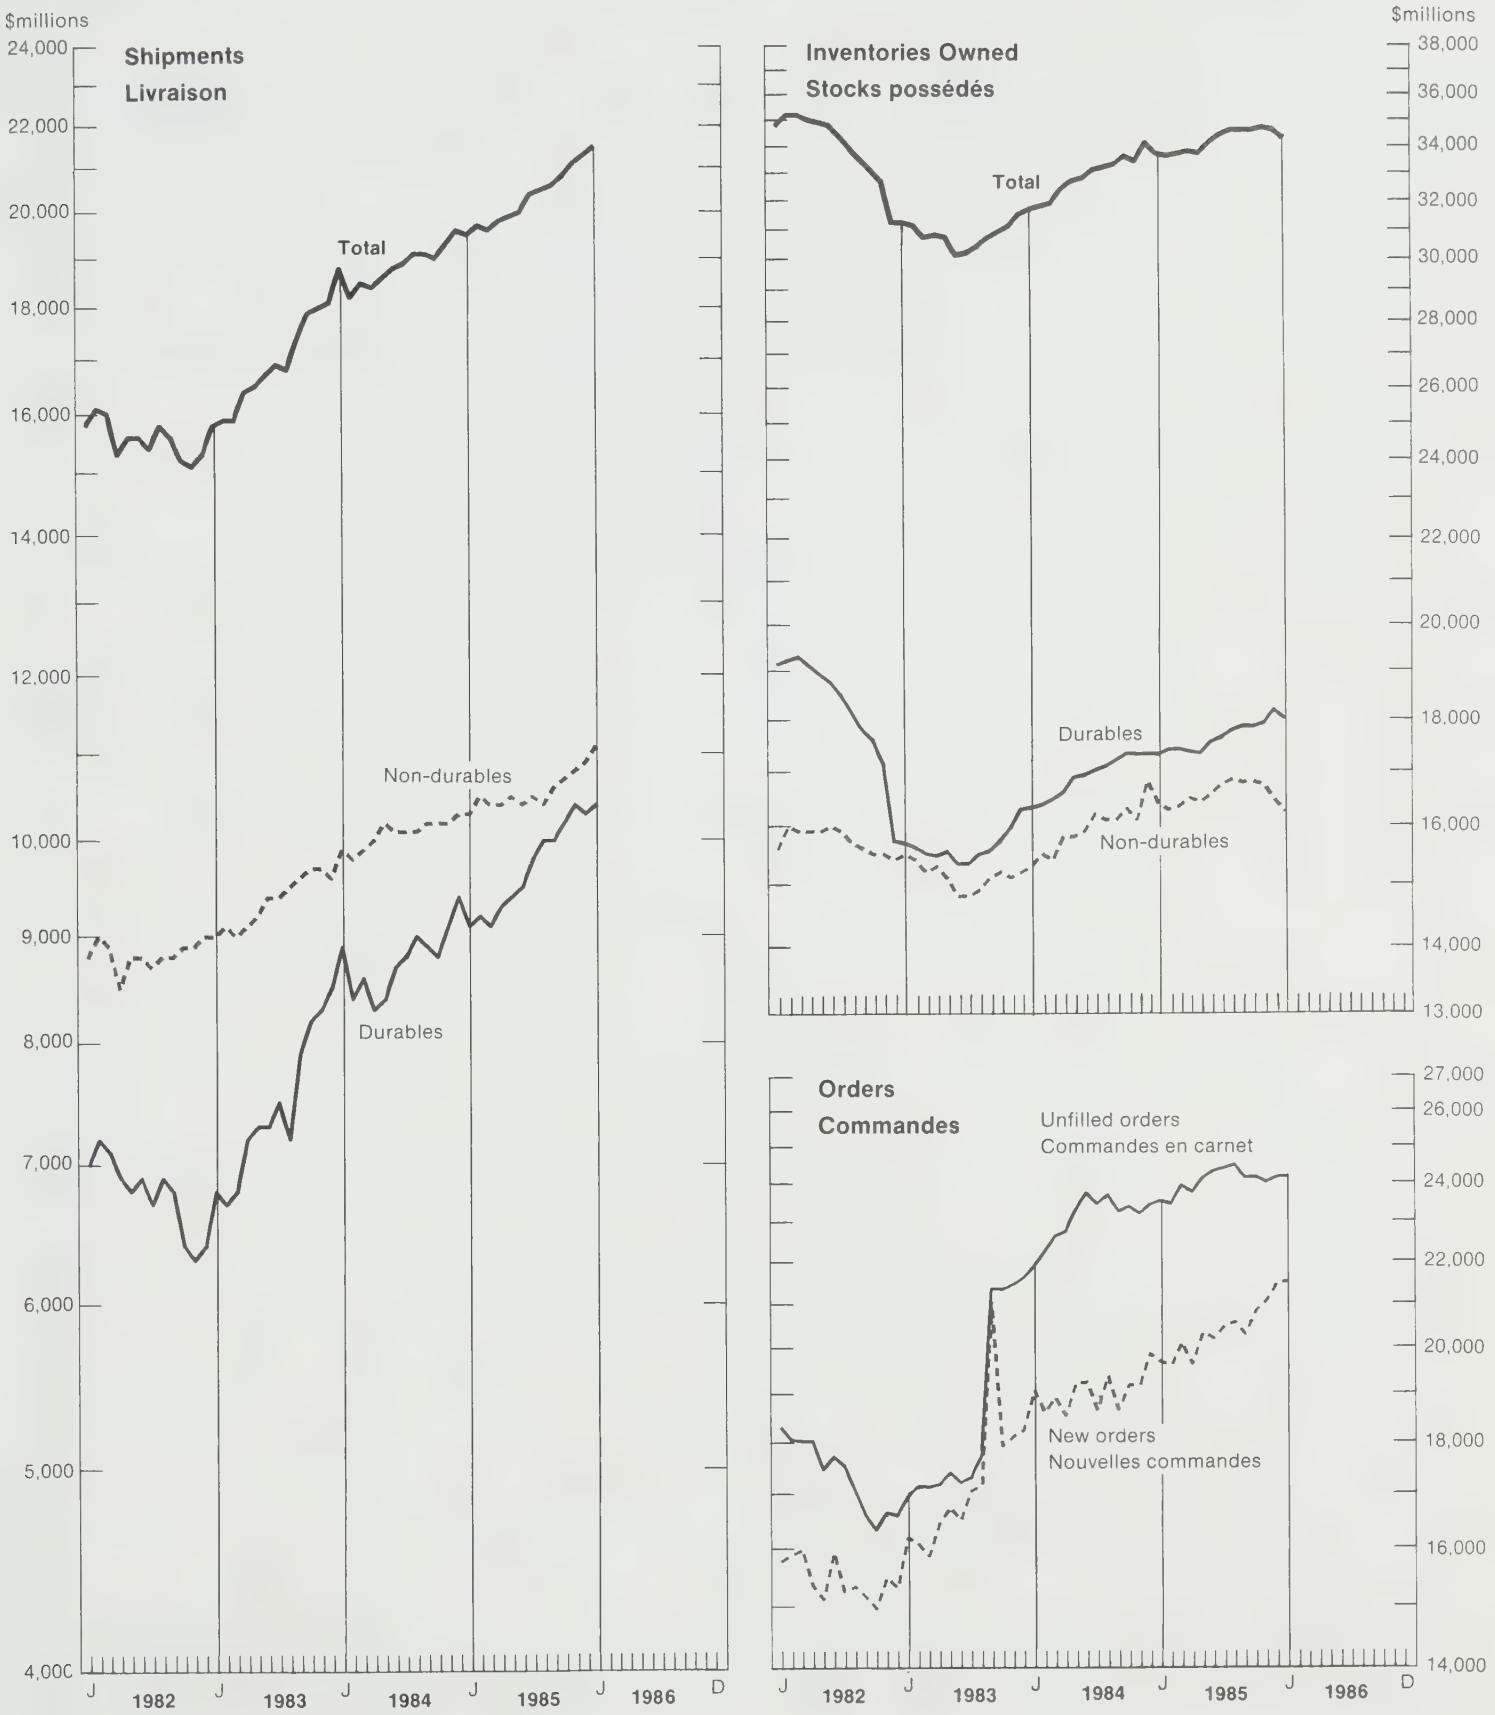

- On a estimé à $20,102.7 millions les livraisons non désaisonnalisées en janvier 1986, ce qui représente une hausse de 1.5% par rapport à la valeur révisée de décembre qui était de $19,812.2 millions et une hausse de 9.4% par rapport à la valeur de janvier 1985 qui était de $18,380.9 millions.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.

(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.

(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)

Inventories, shipments and orders in manufacturing industries

February 1986

Projected from 1982 Census of Manufactures benchmarks with adjustment of 1983 shipments estimates to preliminary census data for that year.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.).

NOTICE TO USERS

Estimates in this publication are subject to revision to accomodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- **Basil McCormick**, Assistant Director, Industry Division
- **Henry Glouchkow**, Chief, Inventories Shipments and Orders in Manufacturing Industries
- **Jacques Lepage**, Unit Head

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- **Basil McCormick,** Directeur adjoint, Division de l'industrie
- **Henry Glouchkow**, Chef, Stocks, livraisons et commandes des industries manufacturières
- **Jacques Lepage,** Chef de sous-section

HIGHLIGHTS

February 1986

- Preliminary estimates indicate that the seasonally adjusted value of shipments in all Canadian manufacturing industries in February, remained virtually unchanged at $21,496.5 million from the revised estimate of $21,514.1 million in January. This follows a gain of 0.4% in January. A $116.1 million increase in refined petroleum and coal products industries was the major contributor to a 1.2% increase in the non-durable goods industries as shipments rose from $11,156.6 million to $11,293.9 million. Shipments of durable goods industries were down 1.5% to $10,202.5 million from $10,357.4 million. Decreases of $144.0 million in primary metal industries and $106.1 million in transportation equipment industries were partly offset by a $73.9 million increase in fabricated metal products industries.

- Seasonally adjusted, inventories owned by manufacturers at the end of February totalled $34,676.8 million, up 1.1% from the previous month's revised value of $34,313.1 million. Total inventories held increased 1.0% to $35,810.8 million from $35,439.7 million, with increases of 1.3% in finished products and 0.9% in raw materials and goods in process.

- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments rose from 1.59:1 in January to 1.61:1 in February. The ratio of finished products inventory to shipments remained at 0.57:1.

- The value of new orders received in February, seasonally adjusted, increased 0.9% to $21,831.3 million from the revised January estimate of $21,645.9 million. In the durable goods industries, new orders with an estimated value of $10,601.7 million were 1.3% higher than the January value of $10,462.0 million, with an increase of $327.9 million in fabricated metal products industries having been only partly offset by a $182.1 million decrease in machinery industries. In the non-durable goods industries, new orders were valued at $11,229.6 million, up 0.4% from the revised estimate of $11,183.9 million for January.

- The seasonally adjusted unfilled orders backlog at the end of February was $24,617.2 million, up 1.4% from the revised January estimate of $24,282.4 million. Unfilled orders increased 1.8% in the durable goods industries to $22,286.5 million from $21,887.3 million at the end of January. In the non-durable goods industries, unfilled orders were down 2.7% to $2,330.7 million from $2,395.1 million.

- Not adjusted for seasonal variation, manufacturers' shipments in February 1986 were estimated at $20,-119.2 million, 0.1% higher than the revised January value of $20,102.7 million. Cumulative shipments for the first two months of 1986, at an estimated $40,221.9 million, were up 9.1% from the $36,880.8 million estimated for the same period in 1985.

POINTS SAILLANTS

Février 1986

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes est demeurée presqu'inchangé à $21,496.5 millions en février 1986 de $21,514.1 millions en janvier. Ceci suit un gain de 0.4% en janvier. Les livraisons des biens non durables ont augmenté de 1.2% passant de $11,156.6 millions à $11,293.9 millions. Cette hausse est principalement attribuable à un gain de $116.1 millions dans les industries des produits raffinés du pétrole et du charbon. Une diminution de 1.5% a été enregistrée pour les biens durables qui sont passés de $10,357.4 millions à $10,202.5 millions. Cette diminution est principalement attribuable à des pertes de $144.0 millions dans les industries de première transformation des métaux et de $106.1 millions dans les industries du matériel de transport. Ces pertes ont été en partie contrebalancées par un gain de $73.9 millions dans les industries de la fabrication des produits métalliques.

- La valeur désaisonnalisée du total des stocks possédés était de $34,676.8 millions en février, une hausse de 1.1% par rapport à la valeur du mois précédent de $34,313.1 millions. Pour leur part, les stocks détenus ont augmenté de 1.0% à $35,810.8 millions de $35,439.7 millions. Des augmentations ont été enregistrées au chapitre des produits finis (+ 1.3%), des matières premières (+ 0.9%) et des biens en cours de transformation (+ 0.9%).

- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.59:1 en janvier à 1.61:1 en février. Le rapport des produits finis aux livraisons est demeuré à 0.57:1.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $21,831.3 millions, ce qui représente une hausse de 0.9% par rapport au mois précédent qui était de $21,645.9 millions. Dans les industries des biens durables, la valeur estimative de $10,601.7 millions était supérieure de 1.3% à la valeur de janvier de $10,462.0 millions. Cette augmentation est principalement attribuable à une hausse de $327.9 millions dans les industries de la fabrication des produits métalliques. Ce gain a été en partie contrebalancé par une perte de $182.1 millions dans les industries de la machinerie. Les nouvelles commandes des biens non durables ont atteint $11,229.6 millions, soit une hausse de 0.4% par rapport à la valeur révisée de janvier ($11,183.9 millions).

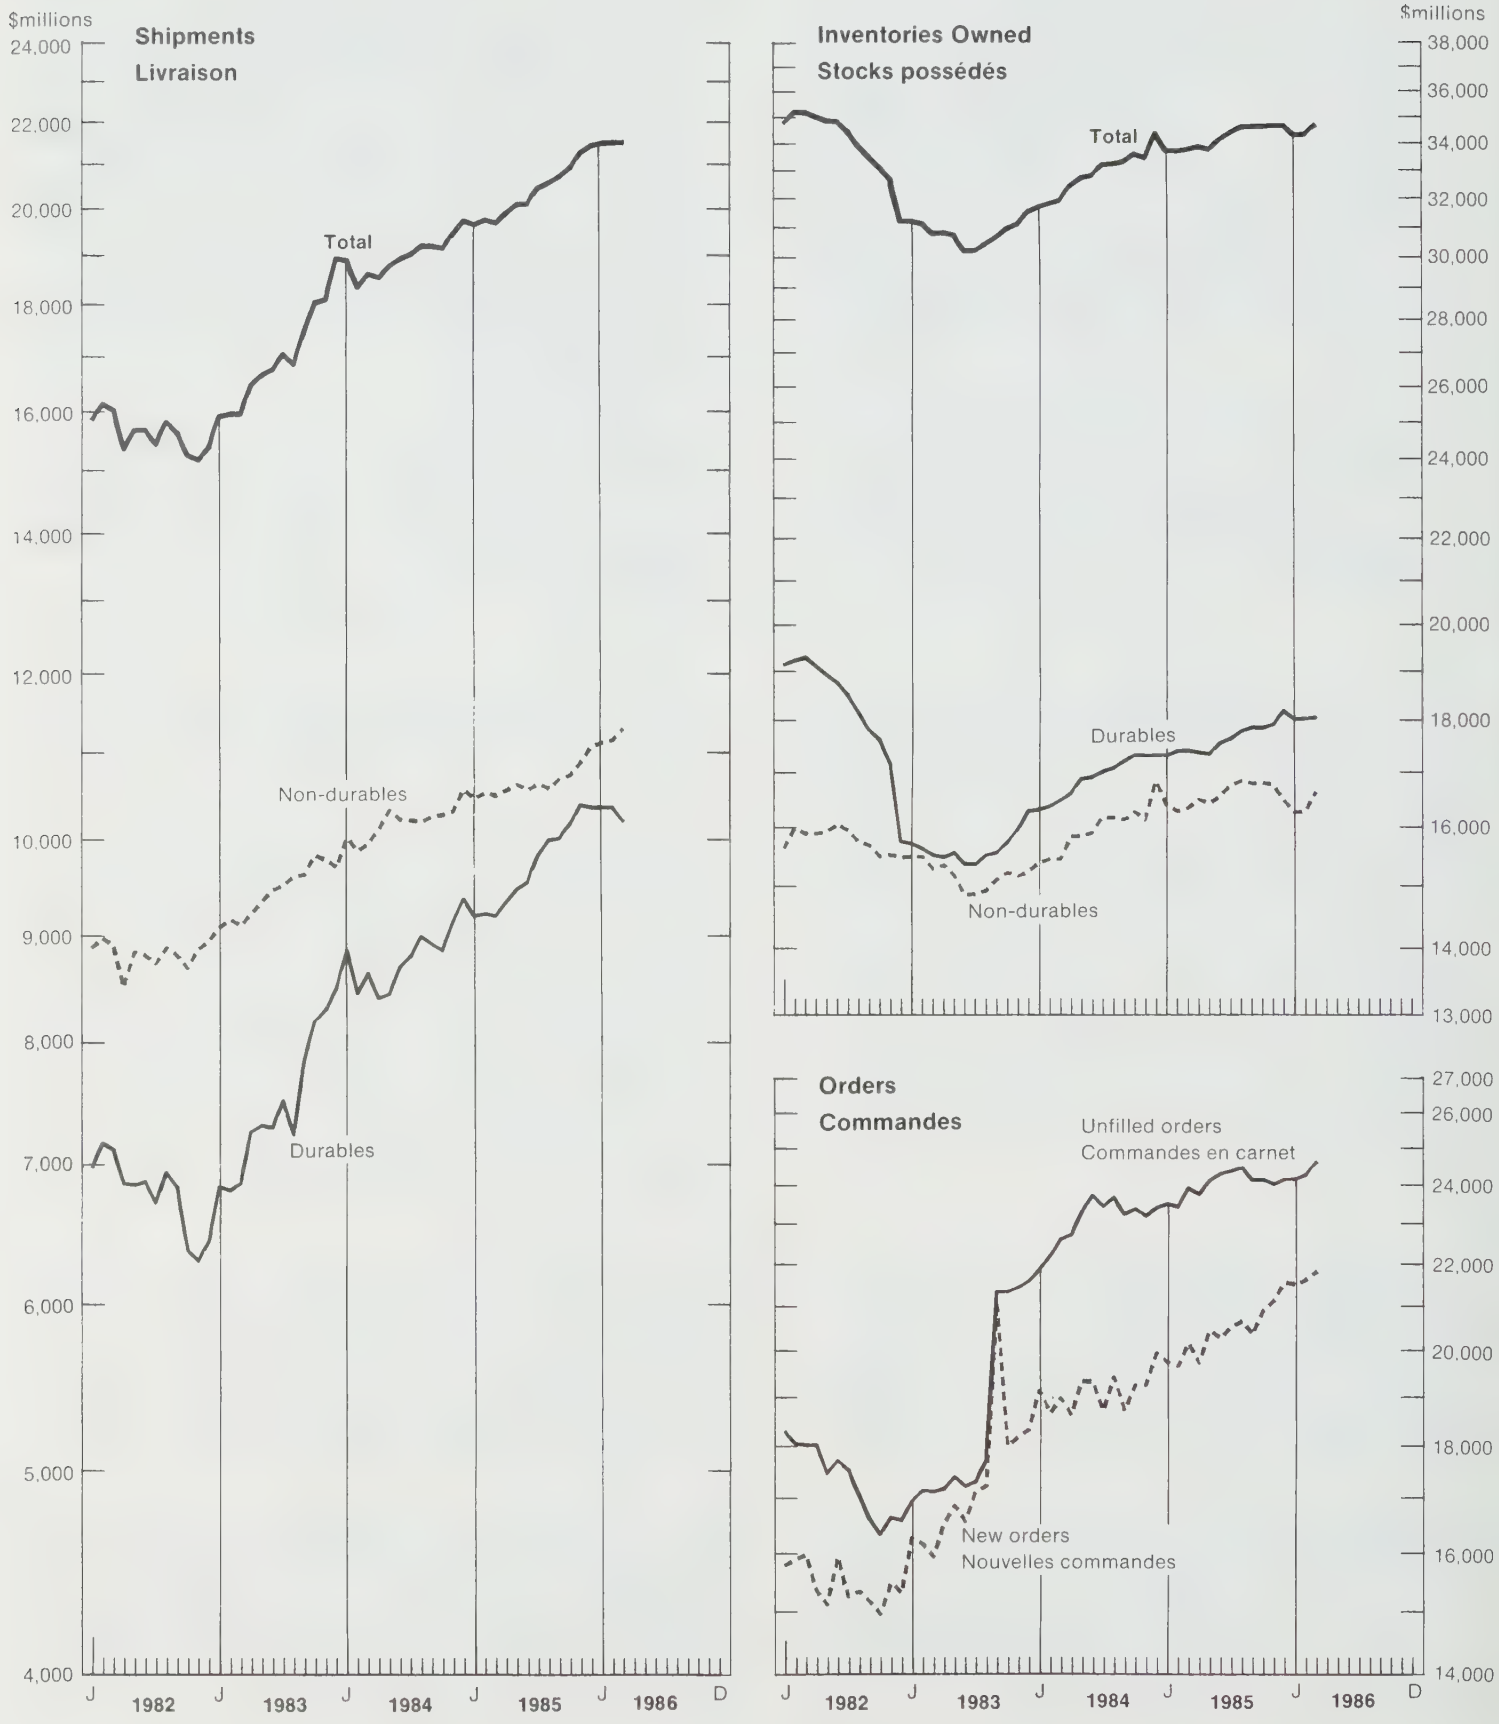

- La valeur estimative des commandes en carnet, après désaisonnalisation s'est établie à $24,617.2 millions en février, une hausse de 1.4% par rapport au mois précédent qui était de $24,282.4 millions. Les commandes en carnet des biens durables ont augmenté de 1.8% passant de $21,887.3 millions à $22,286.5 millions alors que celles des biens non durables ont diminué de 2.7% à $2,330.7 millions de $2,395.1 millions.

- On a estimé à $20,119.2 millions les livraisons non désaisonnalisées en février 1986, ce qui représente une hausse de 0.1% par rapport à la valeur révisée de janvier qui était de $20,102.7 millions. Pour les deux premiers mois de 1986, les livraisons estimatives ont totalisé $40,221.9 millions, soit une hausse de 9.1% par rapport à $36,880.8 millions obtenus au cours de la période correspondante de 1985.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industry.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. comprennent les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

NOTICE TO USERS

Estimates in this publication are subject to revision to accomodate newly-received information. It is advisable always to use data from the most recent issue.

This publication was prepared under the direction of:

- **Basil McCormick,** Assistant Director, Industry Division
- **Henry Glouchkow,** Chief, Inventories Shipments and Orders in Manufacturing Industries
- **Jacques Lepage,** Unit Head

AVIS AUX UTILISATEURS

Prière de toujours consulter les numéros de la plus récente publication puisque les estimations qu'elle renferme sont sujettes à révision pour tenir compte des nouveaux renseignements reçus.

Cette publication a été rédigée sous la direction de:

- **Basil McCormick,** Directeur adjoint, Division de l'industrie
- **Henry Glouchkow,** Chef, Stocks, livraisons et commandes des industries manufacturières
- **Jacques Lepage,** Chef de sous-section

HIGHLIGHTS

March 1986

- Preliminary estimates indicate that the seasonally adjusted value of shipments for all Canadian manufacturing industries decreased 5.5% to $20,236.2 million in March from the revised estimate of $21,414.5 million in February. This decrease followed a decline of 0.5% in February. Data users should note that the unusually large drop in March coincided with a smaller number of trading days due to Easter occuring in March for the first time in eight years. Decreases of $190.2 million in transportation equipment industries and $179.7 million in fabricated metal products industries were the major contributors to a 5.3% decrease in the durable goods industries, as shipments went from $10,124.9 million to $9,590.0 million. Shipments of non-durable goods industries were down 5.7% to $10,646.2 million from $11,289.6 million. Decreases of $280.7 million in refined petroleum and coal products industries and $134.2 million in food industries were the major contributors.

- Seasonally adjusted, inventories owned by manufacturers at the end of March totalled $34,106.8 million, down 2.0% from the previous month's revised value of $34,798.7 million. Total inventories held decreased 1.7% to $35,295.7 million from $35,903.5 million, with decreases of 2.5% in finished products, 1.5% in raw materials and 0.8% in goods in process.

- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments rose from 1.63:1 in February to 1.69:1 in March. The ratio of finished products inventory to shipments went from 0.58:1 to 0.60:1.

- The value of new orders received in March, seasonally adjusted, decreased 6.1% to $20,397.5 million from the February estimate of $21,716.9 million. In the durable goods industries, new orders with an estimated value of $9,649.3 million were 8.2% lower than the February value of $10,508.1 million. Decreases of $398.2 million in fabricated metal products industries and $254.6 million in transportation equipment industries were the major contributors. In the non-durable goods industries, new orders were valued at $10,748.2 million, down 4.1% from the revised estimate of $11,208.8 million for February.

- The seasonally adjusted unfilled orders backlog at the end of March was $24,746.1 million, up 0.7% from the revised February estimate of $24,584.8 million. Unfilled orders increased 0.3% in the durable goods industries to $22,329.8 million from $22,270.5 million at the end of February. In the non-durable goods industries, unfilled orders were up 4.4% to $2,416.3 million from $2,314.3 million.

- Not adjusted for seasonal variation, manufacturers' shipments in March 1986 were estimated at $21,106.8 million, 5.3% higher than the February value of $20,-

POINTS SAILLANTS

Mars 1986

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $20,236.2 millions en mars 1986, soit une baisse de 5.5% par rapport à la valeur révisée de $21,414.5 millions en février. Cette baisse suit une perte de 0.5% en février. Les utilisateurs des statistiques devraient noter que la baisse inaccoutumée en mars correspond à un nombre moins élevé de jours ouvrables, dû au fait que la fête de Pâques tombait en mars pour la première fois en huit ans. Les livraisons des biens durables ont diminué de 5.3% passant de $10,124.9 millions à $9,590.0 millions. Cette baisse est principalement attribuable à des pertes de $190.2 millions dans les industries du matériel de transport et de $179.7 millions dans les industries de première transformation des métaux. Une diminution de 5.7% a été enregistrée pour les biens non durables qui sont passés de $11,289.6 millions à $10,646.2 millions. Cette diminution est principalement attribuable à des pertes de $280.7 millions dans les industries des produits raffinés du pétrole et du charbon et de $134.2 millions dans les industries des aliments.

- La valeur désaisonnalisée du total des stocks possédés était de $34,106.8 millions, une baisse de 2.0% par rapport à la valeur révisée du mois précédent de $34,798.7 millions. Pour leur part, les stocks détenus ont diminué de 1.7% à $35,295.7 millions de $35,903.5 millions. Des diminutions ont été enregistrées au chapître des produits finis (- 2.5%), des matières premières (- 1.5%) et des produits en cours de transformation (- 0.8%).

- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.63:1 en février à 1.69:1 en mars. Le rapport des produits finis aux livraisons est passé de 0.58:1 à 0.60:1.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $20,397.5 millions, ce qui représente une baisse de 6.1% par rapport au mois précédent qui était de $21,716.9 millions. Dans les industries des biens durables, la valeur estimative de $9,649.3 millions était inférieur de 8.2% à la valeur de février de $10,508.1 millions. Cette diminution est principalement attribuable à des pertes de $398.2 millions dans les industries de la fabrication des produits métalliques et de $254.6 millions dans les industries du matériel de transport. Les nouvelles commandes des biens non durables ont atteint $10,748.2 millions, soit une baisse de 4.1% par rapport à la valeur révisée de février ($11,208.8 millions).

- La valeur estimative des commandes en carnet, après désaisonnalisation s'est établie à $24,746.1 millions en mars, une hausse de 0.7% par rapport au mois précédent de $24,584.8 millions. Les commandes en carnet des biens durables ont augmenté de 0.3% passant de $22,270.5 millions à $22,329.8 millions alors que celles des biens non durables ont augmenté de 4.4% à $2,416.3 millions de $2,314.3 millions.

- On a estimé à $21,106.8 millions les livraisons non désaisonnalisées en mars 1986, ce qui représente une hausse de 5.3% par rapport à la valeur révisée de février qui était de $20,042.2

042.2 million. Cumulative shipments for the first three months of 1986, at an estimated $61,251.7 million, were up 6.8% from the $57,333.3 million estimated for the same period in 1985.

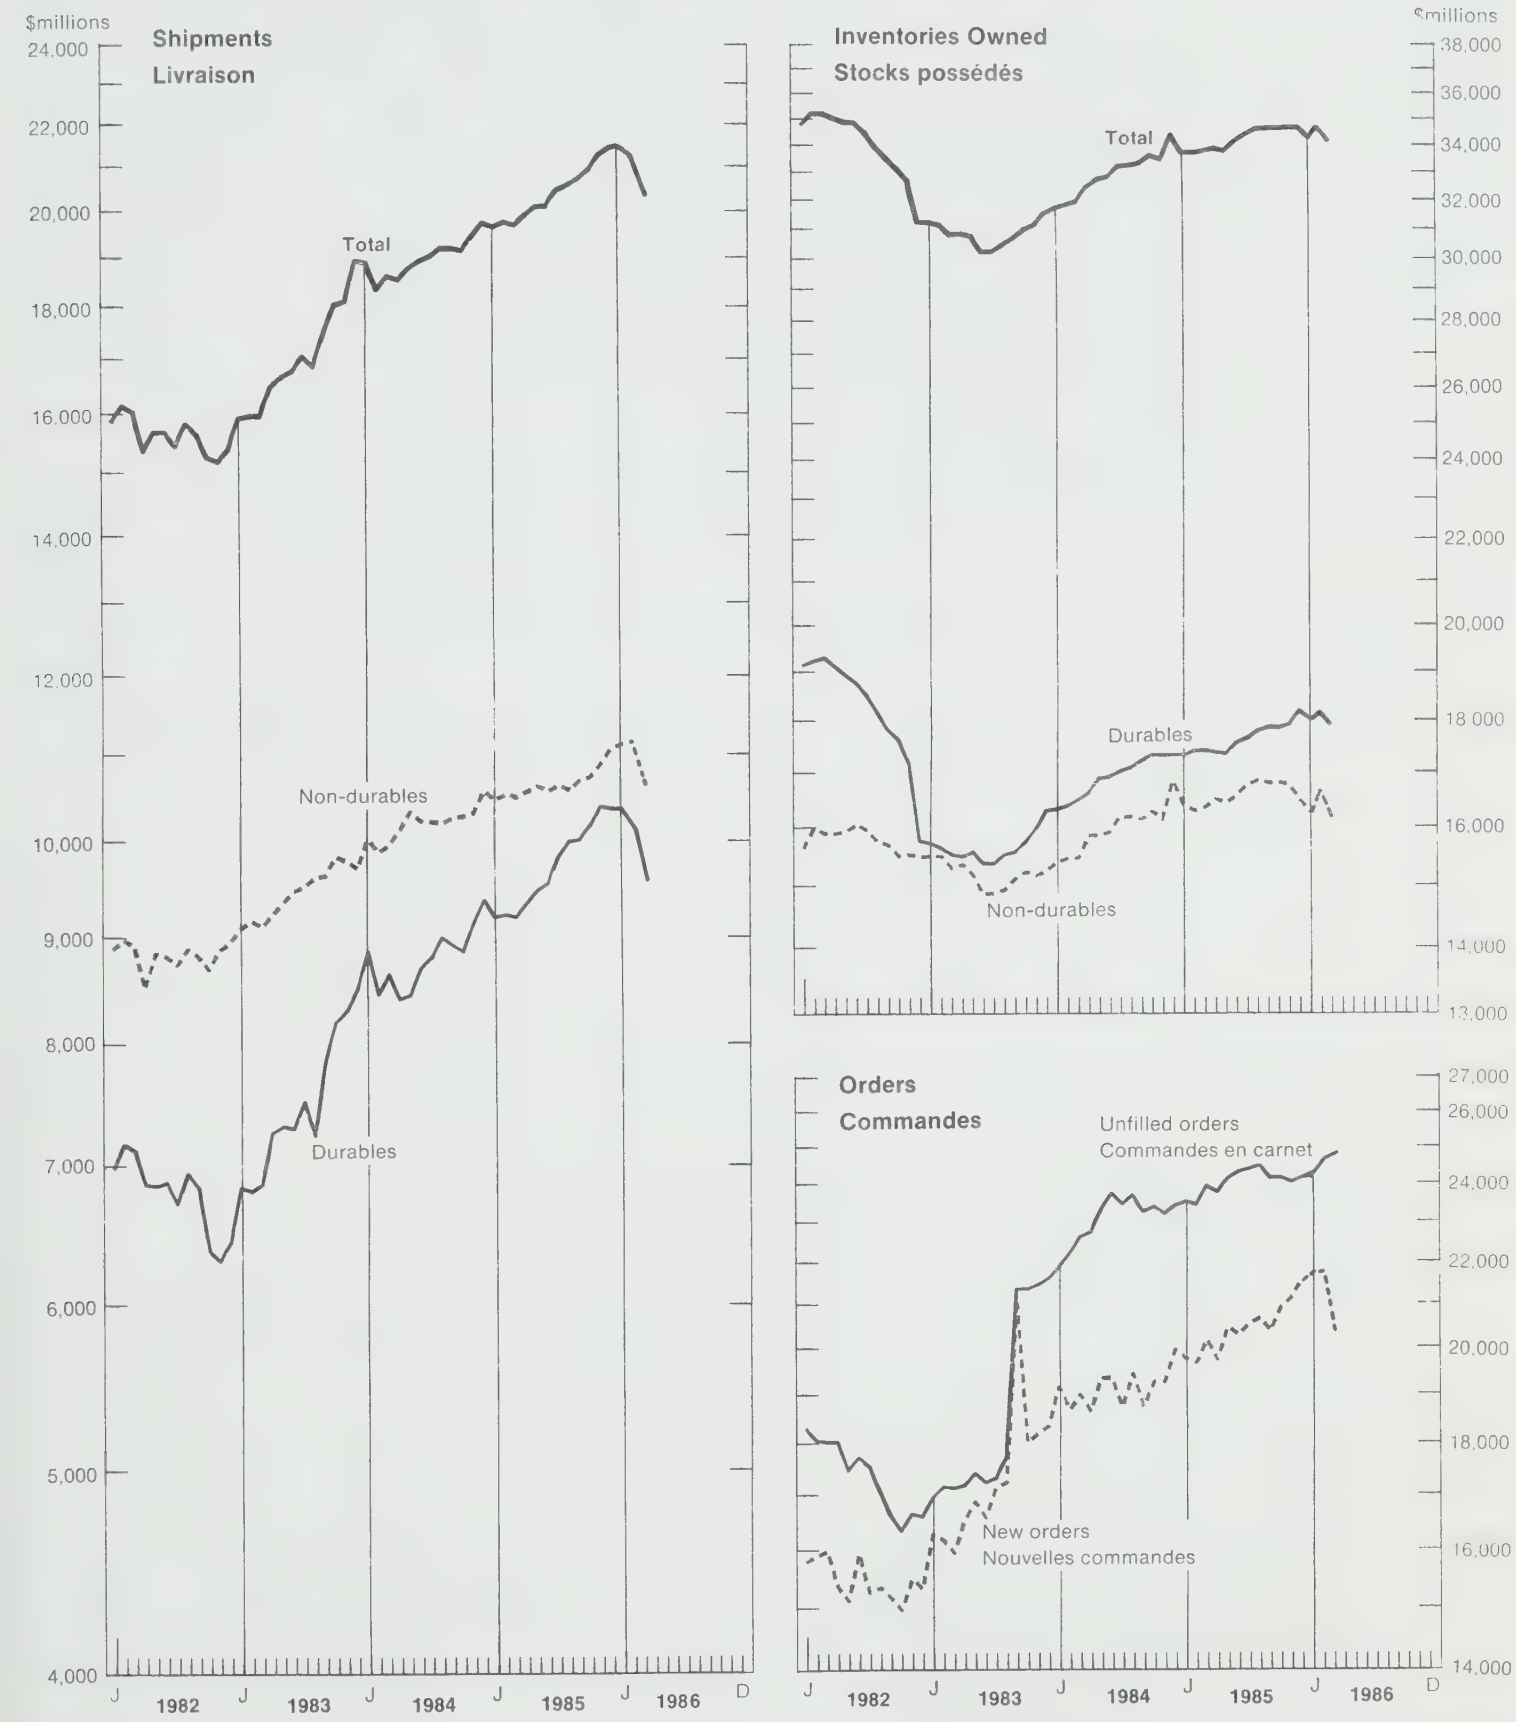

millions. Pour les trois premiers mois de 1986, les livraisons estimatives ont totalisé $61,251.7 millions, soit une hausse de 6.8% par rapport à $57,333.3 millions obtenus au cours de la période correspondante de 1985.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industry.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. comprennent les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

HIGHLIGHTS

April 1986

- Preliminary estimates indicate that the seasonally adjusted value of shipments for all Canadian manufacturing industries increased 5.7% in April to $21,365 million, following a decline of 5.6% in March. In spite of the sharp increase in April, the level of shipments was still 0.7% below the January peak. This peak followed increases averaging 0.9% per month dating back over a 10 month period. It should be noted that fluctuations of the magnitude observed in March and April are infrequent and in this instance coincided with Easter falling in March for the first time in eight years. Increases of $294 million in transportation equipment industries, $174 million in primary metal industries and $158 million in fabricated metal products industries were the major contributors to an 8.7% increase in the durable goods industries, as shipments went from $9,642 million to $10,477 million. Shipments of non-durable goods industries were up 2.9% to $10,888 million from $10,577 million. Increases of $143 million in paper and allied products industries and $112 million in food industries were partly offset by a $166 million decline in refined petroleum and coal products industries.

- Seasonally adjusted, inventories owned by manufacturers at the end of April totalled $34,007 million, virtually unchanged from the March level of $33,957 million. Inventories owned in April, stood 2.3% lower than the February peak level of $34,799 million. Total inventories held, at $35,184 million, remained virtually unchanged from the March level of $35,144 million, with decreases of 0.6% in goods in process and 0.3% in raw materials. There was, however, a 1.1% increase in finished products.

- The ratio of seasonally adjusted total inventories owned to seasonally adjusted shipments dropped from 1.68:1 in March to 1.59:1 in April. The April ratio is at a historically low level. The ratio of finished products inventories to shipments went from 0.59:1 to 0.57:1.

- The value of new orders received in April, seasonally adjusted, increased 5.1% to $21,327 million, but remained 1.8% below the peak of $21,717 million reached in February. The February peak followed five consecutive monthly increases in the value of new orders. In the durable goods industries, new orders with an estimated value of $10,510 million were 9.1% higher than the March value of $9,630 million. Increases of $253 million in transportation equipment industries, $242 million in primary metal industries and $165 million in fabricated metal products industries were the major contributors. In the non-durable goods industries, new orders were valued at $10,816 million, up 1.4% from the estimate of $10,667 million for March.

POINTS SAILLANTS

Avril 1986

- Des estimations préliminaires indiquent que la valeur désaisonnalisée des livraisons des industries manufacturières canadiennes a atteint $21,365 millions en avril, soit une hausse de 5.7% après avoir connu une diminution de 5.6% en mars. En dépit de l'augmentation marquée en avril, la valeur des livraisons est demeurée 0.7% sous le sommet de janvier. Ce sommet suivait des augmentations moyennes mensuelles de 0.9% pour dix mois. Il est à noter que des variations de l'ampleur de celles observées en mars et en avril sont inaccoutumées et qu'elles correspondent à un nombre moins élevés de jours ouvrables, dû au fait que la fête de Pâques tombait en mars pour la première fois en huit ans. Les livraisons des biens durables ont augmenté de 8.7% passant de $9,642 millions à $10,477 millions. Cette hausse est principalement attribuable à des gains de $294 millions dans les industries du matériel de transport, de $174 millions dans les industries de première transformation des métaux et de $158 millions dans les industries de la fabrication des produits métalliques. Une augmentation de 2.9% a été enregistrée pour les biens non durables qui sont passés de $10,577 millions à $10,888 millions. Cette augmentation est principalement attribuable à des gains de $143 millions dans les industries du papier et produits connexes et de $112 millions dans les industries des aliments. Ces gains ont été en partie contrebalancés par une perte de $166 millions dans les industries des produits raffinés du pétrole et du charbon.

- La valeur désaisonnalisée des stocks possédés par les manufacturiers à la fin d'avril totalisait $34,007 millions, soit pratiquement le même niveau qu'en mars, c'est-à-dire $33,957 millions. Les stocks possédés en avril étaient de 2.3% inférieurs au sommet de $34,799 millions de février. Les stocks détenus sont demeurés presqu'inchangés à $35,184 millions de $35,144 millions. Des diminutions ont été enregistrées au chapitre des produits en cours de transformation (-0.6%) et des matières premières (-0.3%) mais une augmentation de 1.1% a été enregistrée pour les produits finis.

- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.68:1 en mars à 1.59:1 en avril. Le rapport pour avril est à un bas historique. Le rapport des produits finis aux livraisons est passé de 0.59:1 à 0.57:1.

- La valeur désaisonnalisée des nouvelles commandes pour avril a augmenté de 5.1% pour un total de $21,327 millions, mais s'est maintenue à 1.8% sous le sommet de $21,717 millions atteint en février. Le sommet de février faisait suite à cinq augmentations mensuelles consécutives de la valeur des nouvelles commandes. Dans les industries des biens durables, la valeur estimative de $10,510 millions etait supérieure de 9.1% à la valeur de mars de $9,630 millions. Cette augmentation est principalement attribuable à des gains de $253 millions dans les industries du matériel de transport, de $242 millions dans les industries de première transformation des métaux et de $165 millions dans les industries de la fabrication des produits métalliques. Les nouvelles commandes des biens non durables ont atteint $10,816 millions, soit une hausse de 1.4% par rapport à le valeur révisée de mars ($10,667 millions).

- The seasonally adjusted unfilled orders backlog at the end of April was down 0.2% to $24,625 million. Prior to this decline, unfilled orders had increased an average of 0.7% a month since the last decrease observed in November 1985. Unfilled orders increased 0.2% in the durable goods industries to $22,293 million from $22,-259 million at the end of March. In the non-durable goods industries, unfilled orders were down 3.0% to $2,333 million from $2,404 million.

- Not adjusted for seasonal variations, manufacturers' shipments in April 1986 were estimated at $21,621 million, 7.3% higher than the April 1985 value of $20,150 million. Cumulative shipments for the first four months of 1986, at an estimated value of $82,866 million, were up 6.9% over the $77,483 million estimated for the same period in 1985.

- La valeur estimative des commandes en carnet, après désaisonnalisation, à la fin d'avril était à la baisse de 0.2% à $24,625 millions. Avant cette baisse, les commandes en carnet avaient augmenté en moyenne de 0.7% mensuellement depuis novembre 1985, alors qu'on observait une diminution. Les commandes en carnet de biens durables ont augmenté de 0.2% passant de $22,259 millions à $22,293 millions alors que celles des biens non durables ont diminué de 3.0% à $2,333 millions de $2,404 millions.

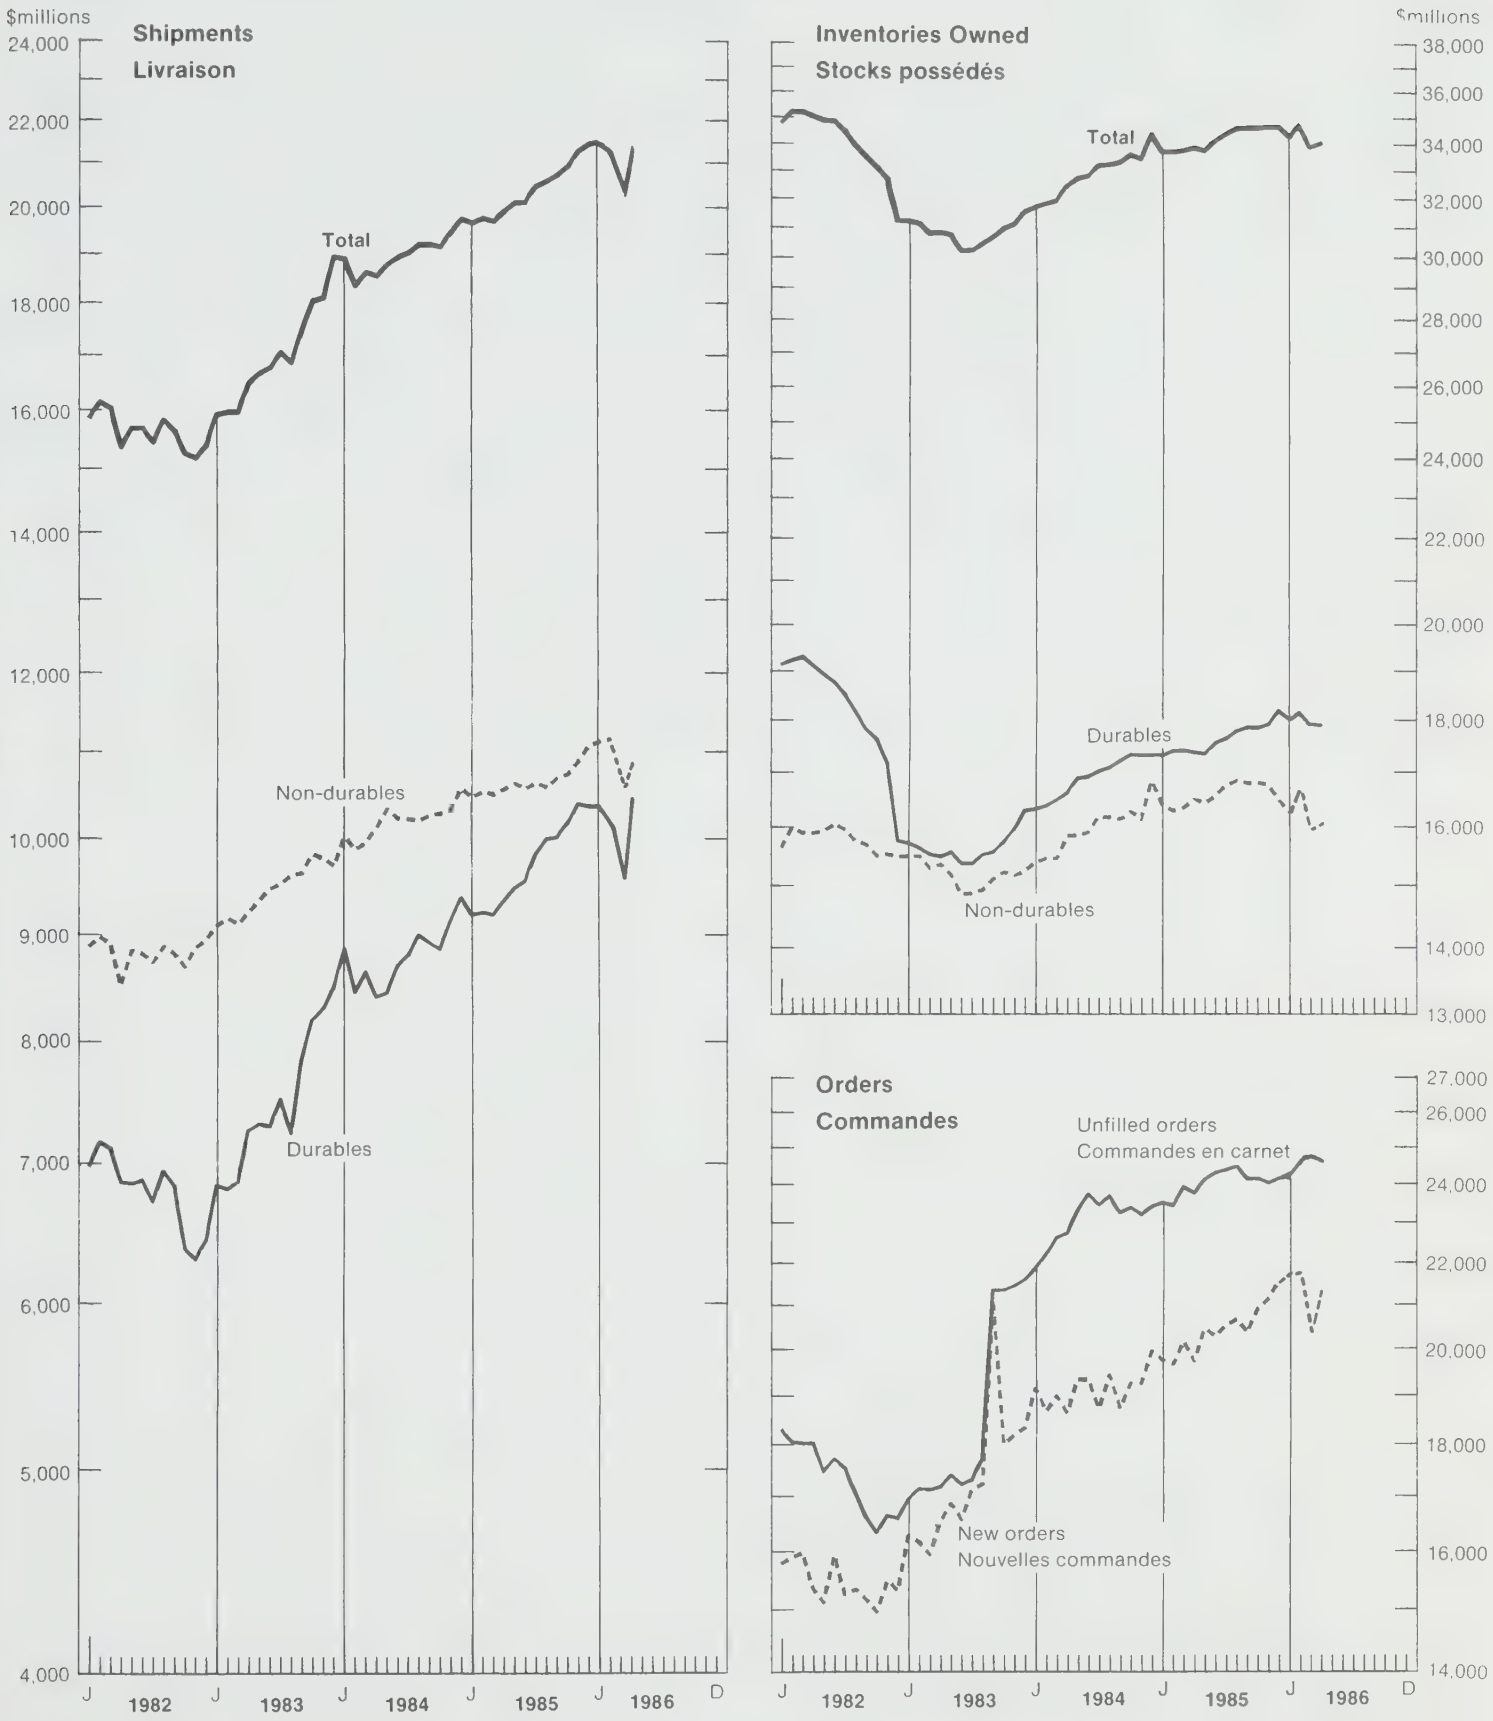

- On a estimé à $21,621 millions les livraisons non désaisonnalisées des manufacturiers en avril 1986, ce qui représente une augmentation de 7.3% par rapport à avril 1985 avec une valeur de $20,150 millions. Pour les quatre premiers mois de 1986, les livraisons estimatives ont totalisé $82,866 millions, soit une hausse de 6.9% par rapport aux $77,483 millions obtenus pour la période correspondante en 1985.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.

(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.

(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industry.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.

(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. comprennent les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

HIGHLIGHTS

May 1986

- Preliminary estimates indicate that the seasonally adjusted value of shipments for all Canadian manufacturing industries decreased 3.1% in May to $20,742 million. Decreases in the values of shipments have been observed in three of the last four months and the level for May stands 3.6% below the January peak. This peak followed increases averaging 0.9% monthly dating back over a 10 month period. The decrease in May was fairly broadly based as 14 of the 22 major groups reported lower shipment values. Decreases of $155 million in transportation equipment industries and $110 million in primary metal industries were the major contributors to a 2.8% decrease in the durable goods industries, as shipments went from $10,494 million to $10,200 million. Shipments of non-durable goods industries were down 3.3% to $10,541 million from $10,905 million where decreases of $153 million in paper and allied products industries, $98 million in refined petroleum and coal products industries and $76 million in food industries accounted for most of the loss.

- Seasonally adjusted, inventories owned by manufacturers at the end of May totalled $34,070 million, up 0.3% from the April level of $33,971 million. The level of inventories observed in the last three months have been significantly lower than those recorded in the last half of 1985 and the first two months of 1986. Total inventories held, at 35,271 million, were up 0.3% from the April level of $35,153 million, with increases of 0.5% in goods in process and finished products and 0.1% in raw materials.

- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments rose from April's historical low of 1.59:1 to 1.64:1 in May, this being more closely aligned with the ratios observed in the last quarter of 1985. The ratio of finished products inventory to shipments went from 0.57:1 to 0.59:1.

- The value of new orders received in May, seasonally adjusted, decreased 2.3% to $20,854 million and was 4.0% below the peak of $21,717 million reached in February. In the durable goods industries, new orders with an estimated value of $10,328 million were 1.8% lower than the April value of $10,514 million. Decreases of $121 million in machinery industries and $67 million in transportation equipment industries were partly offset by a $147 million increase in fabricated metal products industries. In the non-durable goods industries, new orders were valued at $10,526 million, down 2.8% from the estimate of $10,833 million for April.

- The seasonally adjusted unfilled orders backlog at the end of May was up 0.5% to $24,724 million following a 0.2% decline in April. Prior to this decline in April, unfilled orders had increased an average of 0.7% a month since the last decrease observed in November

POINTS SAILLANTS

Mai 1986

- Des estimations préliminaires indiquent que la valeur désaisonnalisée des livraisons des industries manufacturières canadiennes a atteint $20,742 millions en mai, soit une baisse de 3.1%. Des baisses dans la valeur des livraisons furent enregistrées dans trois des quatres derniers mois et la valeur de mai est maintenant 3.6% sous le sommet de janvier. Ce sommet suivait des augmentations moyennes mensuelles de 0.9% pour dix mois. La baisse de mai était assez généralisée alors que 14 des 22 grands groupes de l'industrie ont diminué. Les livraisons des biens durables ont diminué de 2.8% passant de $10,494 millions à $10,200 millions. Cette baisse est principalement attribuable à des pertes de $155 millions dans les industries du matériel de transport et de $110 millions dans les industries de première transformation des métaux. Une diminution de 3.3% a été enregistrée pour les biens non durables qui sont passés de $10,905 millions à $10,541 millions. Cette diminution est principalement attribuable à des pertes de $153 millions dans les industries du papier et produits connexes, de $98 millions dans les industries des produits raffinés du pétrole et du charbon et de $76 millions dans les industries des aliments.

- La valeur désaisonnalisée des stocks possédés par les manufacturiers à la fin de mai totalisait $34,070 millions, soit une hausse de 0.3% du niveau de $33,971 millions atteint en avril. Le niveau des stocks possédés au cours des trois derniers mois était beaucoup plus bas que ceux de la dernière demie de 1985 et des deux premiers mois de 1986. Les stocks détenus ont augmenté de 0.3% à $35,271 millions de $35,153 millions. Des augmentations ont été enregistrées au chapitre des produits en cours de transformation (+ 0.5%), des produits finis (+ 0.5%) et des matières premières (+ 0.1%).

- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé d'un bas historique de 1.59:1 en avril à 1.64:1 en mai. Le rapport de mai s'enligne mieux avec les rapports obtenus dans le dernier trimestre de 1985. Le rapport des produits finis aux livraisons est passé de 0.57:1 à 0.59:1.

- La valeur désaisonnalisée des nouvelles commandes pour mai a diminué de 2.3% pour un total de $20,854 millions. Cette valeur est 4.0% sous le sommet de $21,717 millions atteint en février. Dans les industries des biens durables, la valeur estimative de $10,328 millions était inférieure de 1.8% à la valeur d'avril de $10,514 millions. Cette diminution est principalement attribuable à des pertes de $121 millions dans les industries de la machinerie et de $67 millions dans les industries du matériel de transport. Ces pertes ont été en partie contrebalancées par un gain de $147 millions dans les industries de la fabrication des produits métalliques. Les nouvelles commandes des biens non durables ont atteint $10,526 millions, soit une baisse de 2.8% par rapport à la valeur révisée d'avril ($10,833 millions).

- La valeur estimative des commandes en carnet, après désaisonnalisation, à la fin de mai était à la hausse de 0.5% à $24,724 millions après avoir connu une baisse de 0.2% en avril. Avant cette baisse en avril, les commandes en carnet avaient augmenté en moyenne de 0.7% mensuellement depuis novem-

1985. Unfilled orders increased 0.6% in the durable goods industries to $22,408 million from $22,279 million at the end of April. In the non-durable goods industries, unfilled orders were down 0.7% to $2,316 million from $2,332 million.

- Not adjusted for seasonal variations, manufacturers' shipments in May 1986 were estimated at $21,729 million, 1.3% higher than the May 1985 value of $21,458 million. Cumulative shipments for the first five months of 1986, at an estimated value of $104,630 million, were up 5.7% over the $98,941 million estimated for the same period in 1985.

bre 1985, alors qu'on observait une diminution. Les commandes en carnet des biens durables ont augmenté de 0.6% passant de $22,279 millions à $22,408 millions alors que celles des biens non durables ont diminué de 0.7% à $2,316 millions de $2,332 millions.

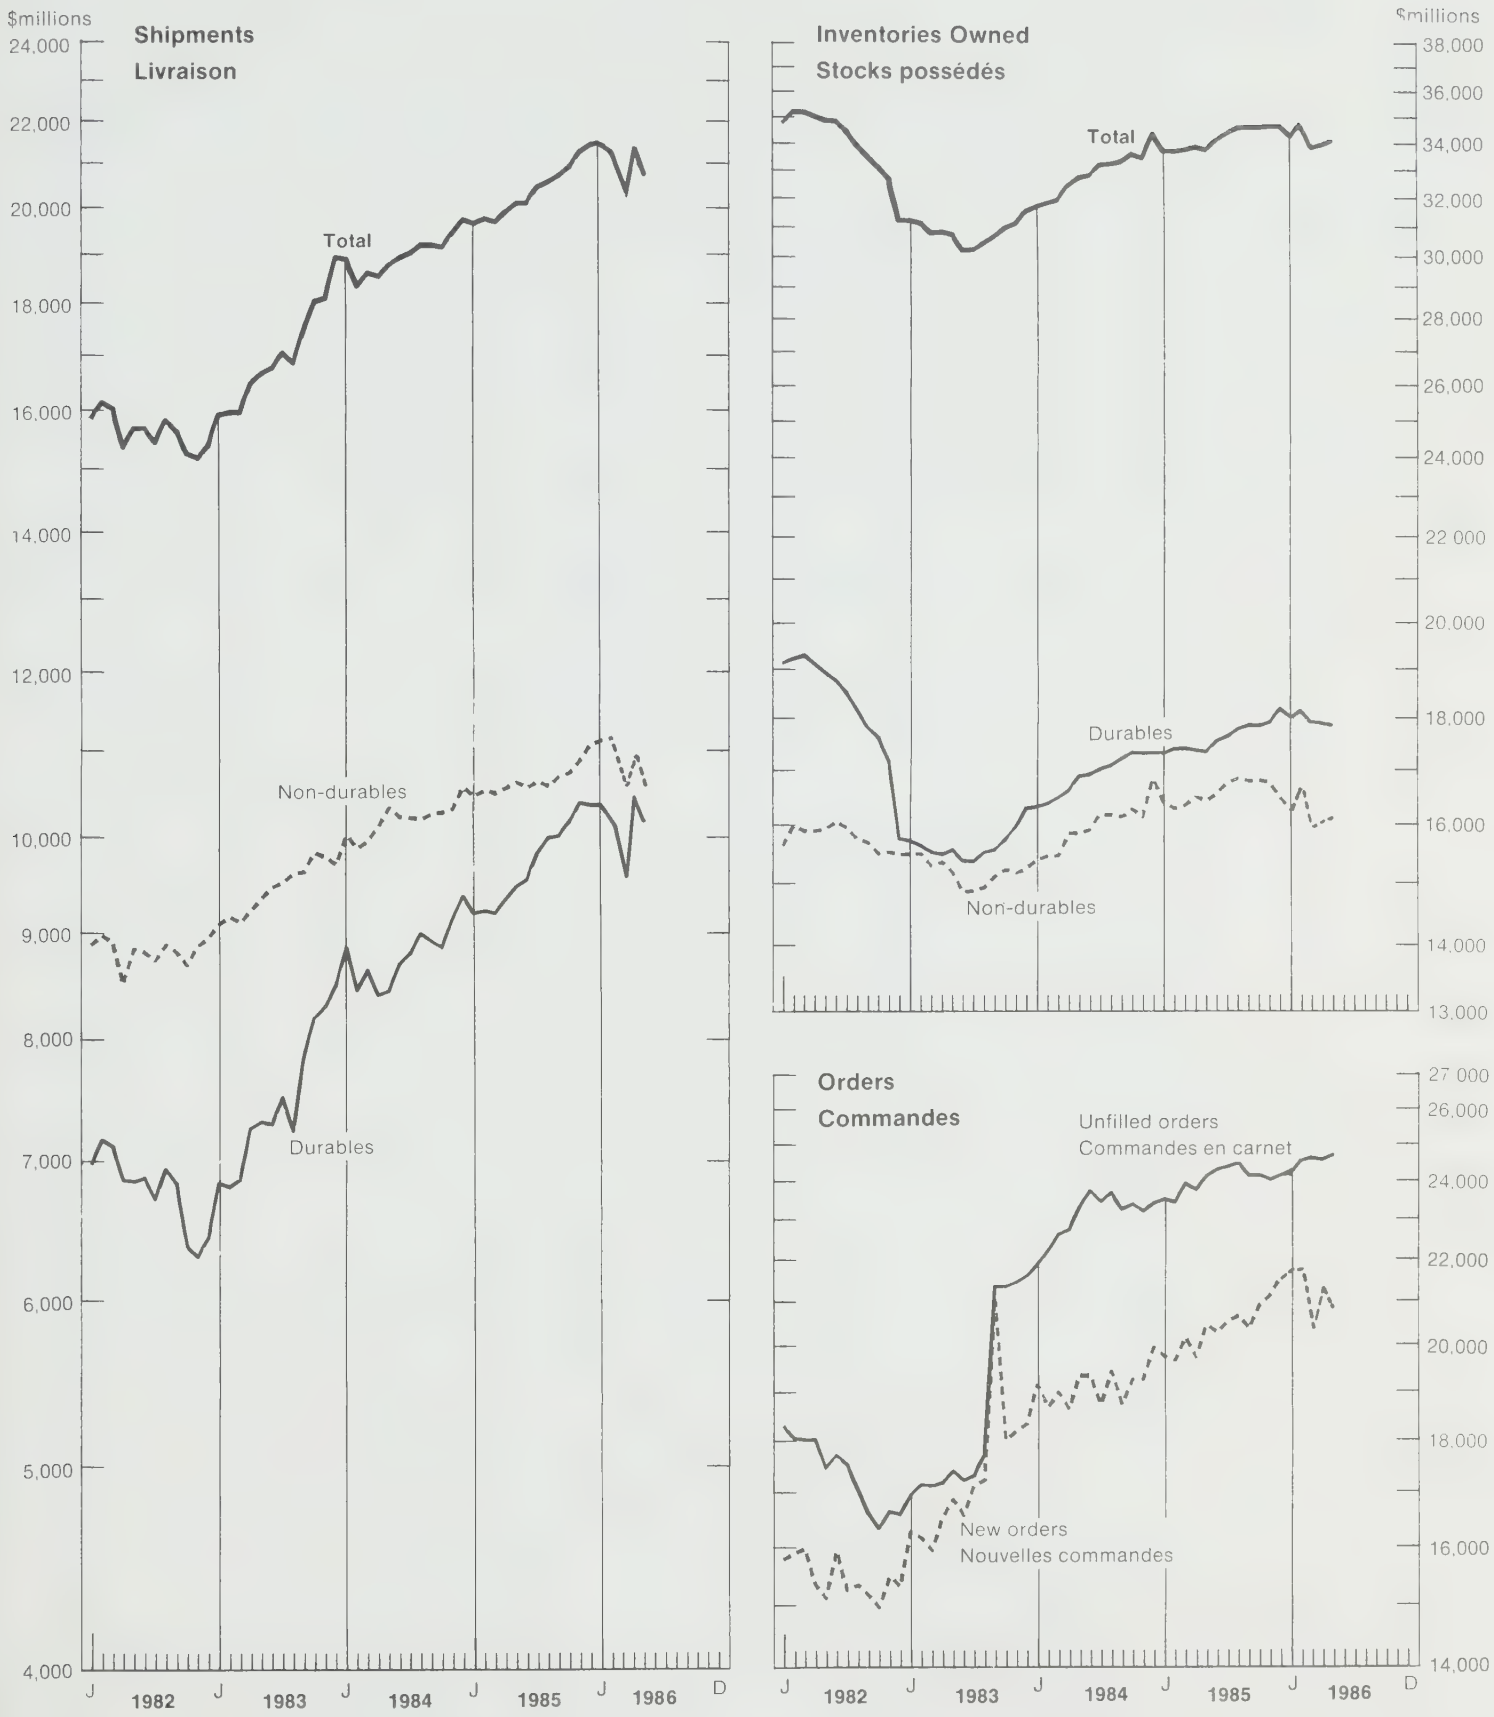

- On a estimé à $21,729 millions les livraisons non désaisonnalisées des manufacturiers en mai 1986, ce qui représente une augmentation de 1.3% par rapport à mai 1985 avec une valeur de $21,458 millions. Pour les cinq premiers mois de 1986, les livraisons estimatives ont totalisées $104,630 millions, soit une hausse de 5.7% par rapport aux $98,941 millions obtenus pour la période correspondante en 1985.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.

(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.

(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industry.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.

(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. comprennent les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

Inventories, shipments and orders in manufacturing industries

June 1986

Projected from 1982 Census of Manufactures benchmarks with adjustment of 1983 shipments estimates to preliminary census data for that year.

Starting with the January 1985 issue, the tables are now based on the 1980 Standard Industrial Classification (S.I.C.).

HIGHLIGHTS

June 1986

- Preliminary estimates indicate that the seasonally adjusted value of shipments for all Canadian manufacturing industries decreased 3.5% in June to $20,005 million. Decreases in the values of shipments have been observed in four of the last five months and the level for June stands 7.0% below the January peak and is in line with levels observed in the second quarter of 1985. The decrease in June was broadly based as 18 of the 22 major groups reported lower shipments. In the durable goods industries, all nine major groups declined as shipments in June declined 5.9% to $9,599 million. Decreases of $228 million in transportation equipment industries, $97 million in wood industries and $95 million in electrical and electronic products industries were the major contributors. Shipments of non-durable goods industries were down 1.1% to $10,405 million where a $100 million decline in refined petroleum and coal products industries was partly offset by a $66 million increase in paper and allied products industries.

- Seasonally adjusted, inventories owned by manufacturers at the end of June remained virtually unchanged at $34,063 million. There has been little change in the level of inventories over the last three months, the June level being only 0.3% higher than the March 1986 level. There was also very little change in total inventories held at $35,232 million. Decreases of 0.8% in goods in process and 0.5% in finished products were offset by a 1.0% increase in raw materials.

- The ratio of seasonally adjusted total inventory owned to seasonally adjusted shipments rose from 1.64:1 in May to 1.70:1 in June. This is the highest ratio reported in the last 12 months. The ratio of finished products inventory to shipments went from 0.59:1 to 0.60:1.

- The value of new orders received in June, seasonally adjusted, decreased 4.0% to $19,997 million. The June value is the lowest since April 1985. In the durable goods industries, new orders with an estimated value of $9,469 million were 8.3% lower than May. Decreases of $377 million in primary metals industries, $238 million in transportation equipment industries and $122 million in fabricated metal products industries accounted for most of the loss. In the non-durable goods industries, new orders were valued at $10,528 million, up 0.3%.

- The seasonally adjusted unfilled orders backlog at the end of June remained almost unchanged at $24,704 million, following a 0.4% increase in May. Apart from a small decline of 0.2% in April, unfilled orders have been rising since November 1985. Unfilled orders decreased 0.6% in the durable goods industries to $22,279 million. In the non-durable goods industries, unfilled orders were up 5.3% to $2,425 million.

POINTS SAILLANTS

Juin 1986

- Des estimations préliminaires indiquent que la valeur désaisonnalisée des livraisons des industries manufacturières canadiennes a atteint $20,005 millions en juin, soit une baisse de 3.5%. Des baisses dans la valeur des livraisons furent enregistrées dans quatre des cinq derniers mois et la valeur de juin est maintenant 7.0% sous le sommet de janvier et s'enligne avec les niveaux obtenus dans le deuxième trimestre de 1985. La baisse de juin était généralisée alors que 18 des 22 grands groupes ont diminué. Dans les industries des biens durables, les neuf grands groupes ont tous diminué alors que les livraisons sont passées à $9,599 millions, soit une perte de 5.9%. Cette baisse est principalement attribuable à des pertes de $228 millions dans les industries du matériel de transport, de $97 millions dans les industries du bois et de $95 millions dans les industries des produits électriques et électroniques. Une diminution de 1.1% a été enregistrée pour les biens non durables qui sont passés de $10,405 millions. Cette diminution est principalement attribuable à une perte de $100 million dans les industries des produits raffinés du pétrole et du charbon. Cette perte a été en partie contrebalancée par un gain de $66 millions dans les industries du papier et produits connexes.

- La valeur désaisonnalisée du total des stocks possédés par les manufacturiers à la fin de juin est demeurée presqu'inchangée à $34,063 millions. Le niveau des inventaires a très peu varié au cours des trois derniers mois alors que le niveau de juin est seulement 0.3% supérieur à celui de mars. De même, les stocks détenus ont peu changés à $35,232 millions. Des diminutions ont été enregistrées au chapitre des produits en cours de transformation (—0.8%) et des produits finis (—0.5%) mais une augmentation de 1.0% a été enregistrée pour les matières premières.

- Le rapport du total des stocks possédés désaisonnalisés aux livraisons désaisonnalisées est passé de 1.64:1 en mai à 1.70:1 en juin. Ceci est le plus haut rapport des douze derniers mois. Le rapport des produits finis aux livraisons est passé de 0.59:1 à 0.60:1.

- La valeur désaisonnalisée des nouvelles commandes pour juin a diminué de 4.0% pour un total de $19,997 millions. La valeur de juin est la plus basse depuis avril 1985. Dans les industries des biens durables, la valeur estimative de $9,469 millions était inférieure de 8.3% à la valeur de mai. Cette diminution est principalement attribuable à des pertes de $377 millions dans les industries de première transformation des métaux, de $238 millions dans les industries du matériel de transport et de $122 millions dans les industries de la fabrication des produits métalliques. Les nouvelles commandes des biens non durables ont atteint $10,528 millions, soit une hausse de 0.3%.

- La valeur estimative des commandes en carnet, après désaisonnalisation, est demeurée presqu'inchangée à $24,704 millions en juin après avoir connu une hausse de 0.4% en mai. À part d'une légère diminution de 0.2% en avril, les commandes en carnet ont augmenté depuis novembre 1985. Les commandes en carnet des biens durables ont diminué de 0.6% à $22,279 millions alors que celles des biens non durables ont augmenté de 5.3% à $2,425 millions.

- Not adjusted for seasonal variations, manufacturers' shipments in June 1986 were estimated at $21,751 million, 2.1% higher than June 1985. Cumulative shipments for the first six months of 1986 have been estimated at $126,362 million; although the 1986 cumulative shipments up to June are 5.1% higher over the same period in 1985, the rate has been declining since January where it was 9.4%.

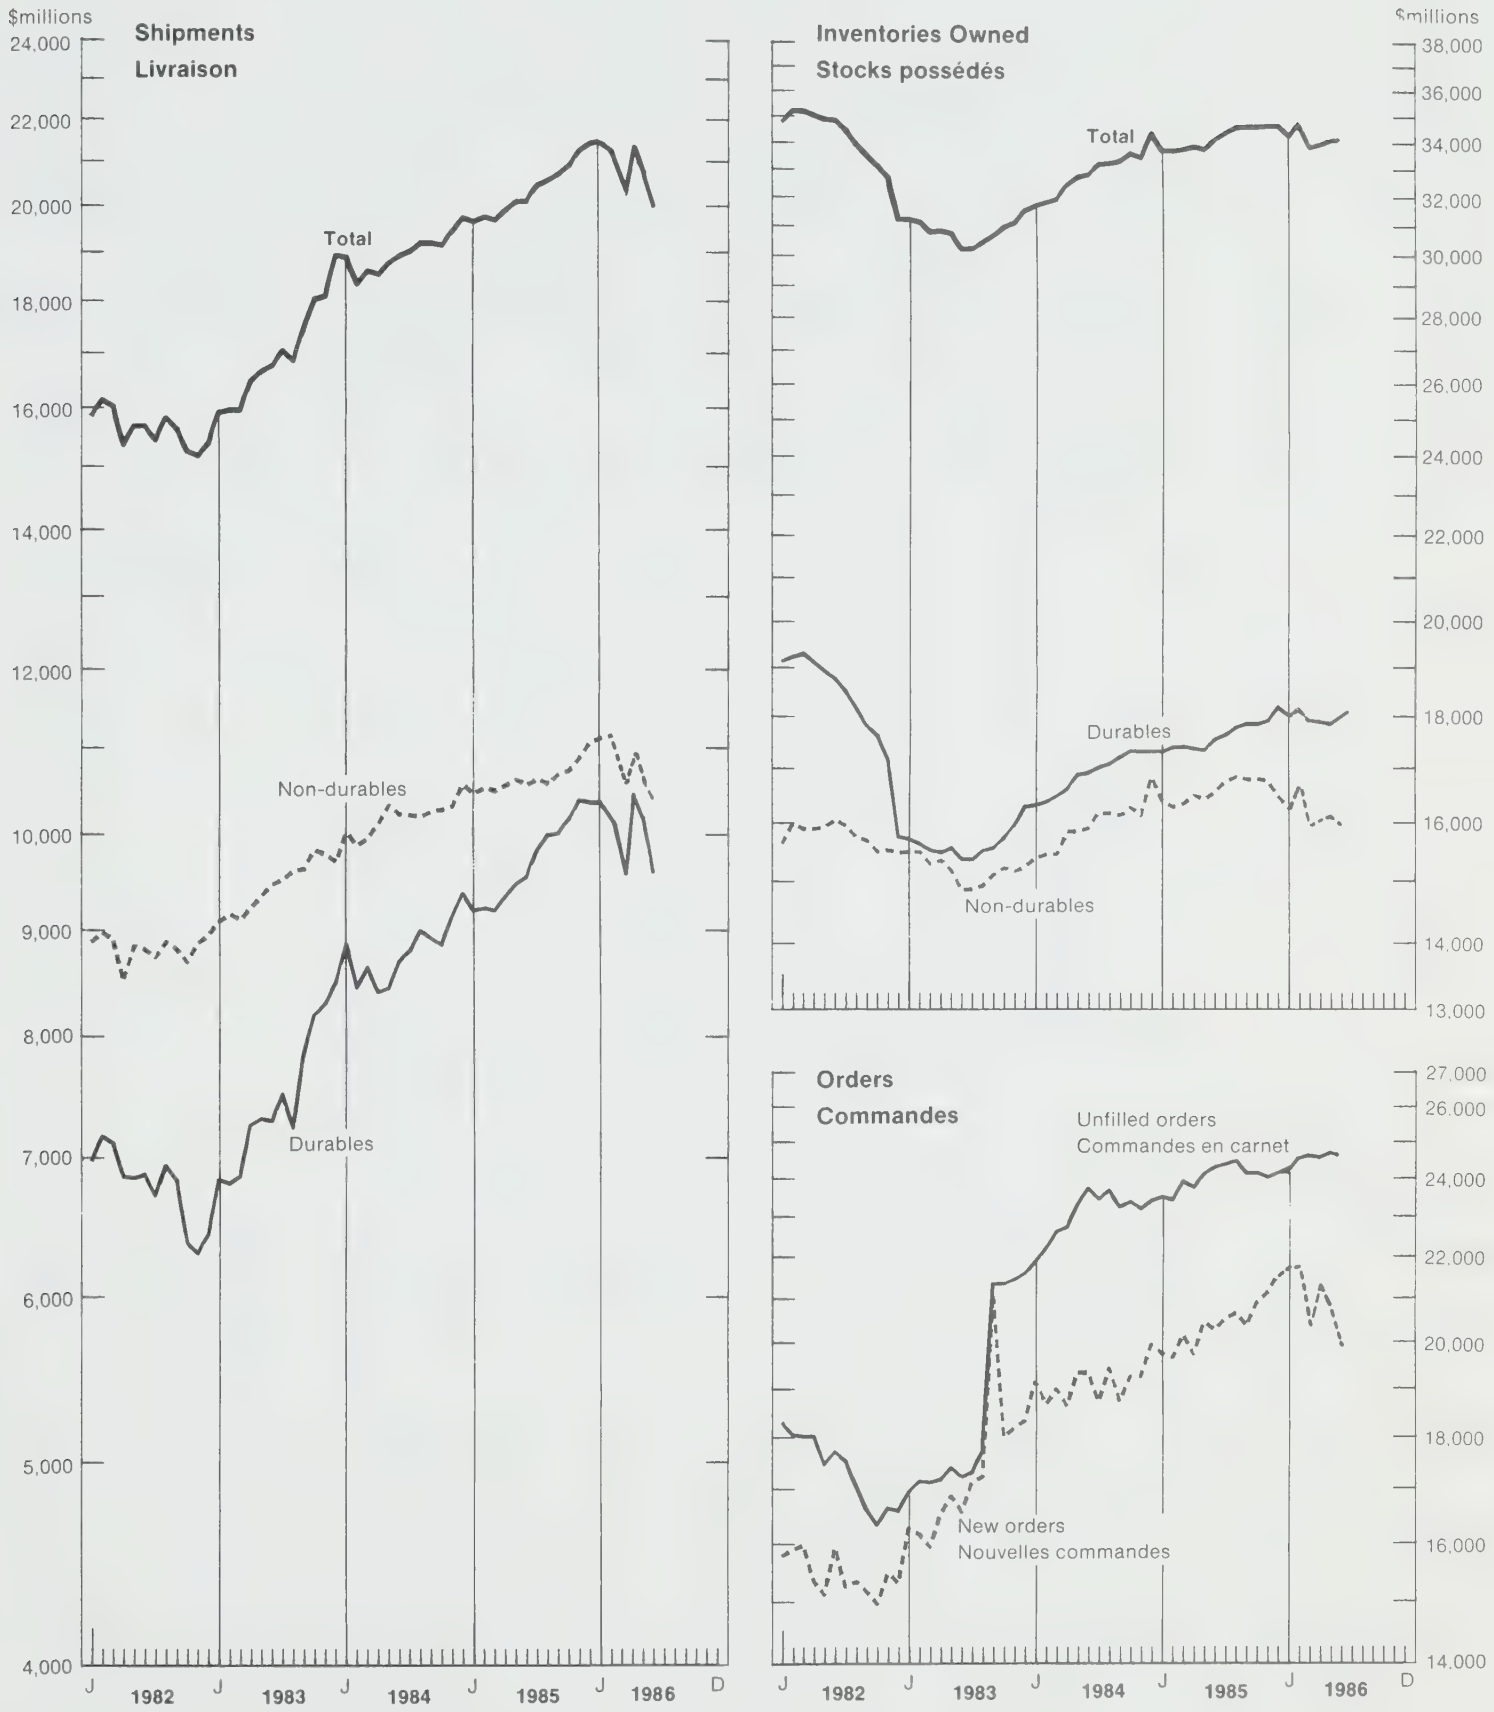

- On a estimé à $21,751 millions les livraisons non désaisonnalisées des manufacturiers en juin 1986, ce qui représente une augmentation de 2.1% par rapport à juin 1985. Pour les six premiers mois de 1986, les livraisons estimatives ont totalisées $126,362 millions; bien que les livraisons cumulatives jusqu'à la fin de juin sont 5.1% supérieures à la période correspondante de 1985, ce taux est à la baisse depuis janvier alors qu'il était de 9.4%.

FOOTNOTES

Table 1

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 3-4

(1) Series which contain no significant seasonality, include: raw materials in the petroleum industries in Table 3 and raw materials in the supplementary classification - automotive products industries in Table 4. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industry.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 3-4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans l'industrie pétrolière du tableau 3 et les matières premières dans la classification complémentaire-industries connexes de l'automobile du tableau 4. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. comprennent les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1982 Census with adjustment of 1983 shipments estimates to preliminary census data for that year. Values for years prior to 1982 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1982 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned, are published. The difference between inventory held and inventory owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufac-

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1982 et rectifications aux estimations des livraisons de 1983 par rapport aux données préliminaire de recensement pour cette année. Les chiffres pour les années jusqu'à 1982 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1982 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de

turers' books from total inventory, the value of manufacturers' investment in inventory is derived.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished Products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and orders books are accordingly not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimated for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates. the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

Afin de réduire la distortion qui surviendrait dans les quatres industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas inclus dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularily have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groups mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques a un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.
